

Attorney Docket No.: P-4333-US3

AMENDMENTS TO THE CLAIMS

RECEIVED
CENTRAL FAX CENTER

NOV 13 2007

Please amend claims 43 and 47.

Please cancel claim 46.

The following listing of claims replaces all versions, and listings, of claims in this application.

Listing of Claims:

1-42. (canceled)

43. (Currently amended) A system for reconstructing an image, the system comprising: a controller to:

receive selected image data from an in-vivo device;

pre-process the selected image data by applying error correction code, gradient evaluation, or detecting edges; and

interpolate the selected image data to produce reconstructed image data, so that the reconstructed image data includes more data than selected image data; and

post-process the interpolated image data by applying a median filter.

44. (Previously Presented) The system of claim 43, wherein the controller interpolates by linear interpolation, quadratic interpolation, bicubic interpolation, polynomial interpolation, or weighted average interpolation.

45. (Previously Presented) The system of claim 43, wherein the controller is to produce additional image data resulting in a reconstructed image.

46. (Canceled)

47. (Currently amended) The system of claim ~~46~~⁴³, wherein the controller is further to post-process by ~~a method selected from a group including: image sharpening, color~~

Attorney Docket No.: P-4333-US3

~~suppression, intensity adjustment, convolution and applying a median filter.~~

48. (Canceled)

49. (Previously Presented) The system of claim 43, wherein the controller is to generate reconstructed data based on said selected image data.

50. (Previously Presented) The system of claim 43 wherein the controller is to receive the selected image data from a swallowable capsule.

51. (Previously Presented) The system of claim 43 comprising an in vivo imager to receive a plurality of input data corresponding to an image and to produce said selected image data.

52. (Previously Presented) The system of claim 51 comprising a transmitter to transmit said selected image data.
